Map Collection #31: U.S. Geological Survey

Unless otherwise indicated, the maps in this collection are topographic in format, while also showing towns, cities, larger political divisions, transportation routes, and waterways. A legend and a description of USGS topographical maps are shown on the reverse sides of most of the maps in this collection; however, as many are cloth-backed, this information is not visible for each map. Maps are colored, measure 16" x 20", are based on a scale of 1/125,000, and are published by the United States Geological Survey.

Maps of areas lying within more than one state or territory are listed by state in the order given on each individual map; therefore, maps of the appropriate adjoining state should also be consulted when border areas are involved. The preceding is especially true for Indian Territory and Oklahoma maps, which contain much overlap because of historical changes.
